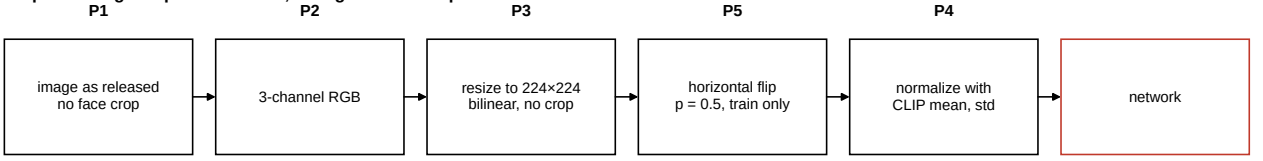
Preprocessing: keep the evidence, change as little as possible



P7: class-exact batches of 32
16 real + 16 fake, interleaved

P8: evaluation = resize + normalize
no flip, no test-time augmentation

not used: secondary face crop
(56.05% vs 97.04% validation)

Colour jitter, blur, JPEG and random crops are left out because they alter or remove the traces of manipulation.
